

Alexander Wong

Frontend Software Engineer

Greater Toronto Area, ON | (647) 295-5590 | lex.won@gmail.com | linkedin.com/in/alexanderswong

Technical Qualifications

- **AI-Assisted Development & Tooling:** GitHub Copilot, Cursor, Claude Code, MCP Server Integration, Skills, LLM Workflow Automation, Prompt Engineering
 - **Frontend:** React, React Testing Library, Jest, Vite, MSW, pnpm, npm, webpack, mocha, Angular, Sencha, Dojo
 - **Backend & Platforms:** Go, Node.js, NestJS, Spring, Maven, Hibernate, .NET, WebSphere Portal, SharePoint, JBoss, LAMP
 - **Languages:** TypeScript, JavaScript, Java, Go, C#, PHP
 - **DevOps & Databases:** Kubernetes, GitHub Actions, Jenkins, AWS, Docker, IIS, Postgres, Microsoft SQL Server, Oracle Database, Endeca, MySQL
-

Professional Experience

Nirmata | Toronto, Ontario

Enterprise Kubernetes security and governance platform built on top of Kyverno.

Senior Frontend Engineer | January 2025 – June 2026

- Established AI-assisted development standards by creating coding conventions and rules for an LLM-assisted workflow. Created Skills for safely evaluating and merging massive (10,000+ line) AI-generated PRs, reducing the PR bottleneck across the frontend team.
- Decoupled the legacy frontend packages into independently deployable SPAs within a new monorepo. Refactored GitHub Actions CI/CD pipelines to allow the frontend team to release new SPAs separate from the central build process, increasing deployment quality and reducing build time from 20 to 8 minutes.
- Created an integration testing platform creating 75% code coverage for all new features in both legacy SPAs and modern monorepo, increasing deployed code quality while not affecting build times.
- Led the technical delivery of the Agent Hub and Copilot features. Orchestrated cross-functional technical delivery across the entire stack. From React/TypeScript frontends down to Java APIs, Kafka event pipelines, and Go-based Kubernetes daemons. These features were prominently demoed at KubeCon and customer engagement sessions.
- Shaped product strategy alongside leadership. Worked directly with the CPO and UX designer to scope, prototype, and deliver new product capabilities. Evaluated technical POCs and made strategic calls to pivot or halt projects when architectural complexity outweighed business value.
- Introduced practical UI system design interviews to improve engineering hiring quality. Cross-trained backend engineers and Customer Success teams on frontend standards to break down development silos and increase the company's ability to deliver on customer requests.

ApplyBoard Inc. | Kitchener, Ontario

Educational technology platform connecting students with global educational institutions.

Senior Software Engineer | September 2021 – September 2024

- Architected and delivered a dynamic workflow designer that automated manual application processing, driving a 99% reduction in processing time (from 5 days to 10 minutes) and significantly accelerating customer onboarding.
- Designed and implemented a Backend-for-Frontend (BFF) architecture handling 100,000+ daily requests and aggregations, simplifying client-side state management and optimizing frontend performance.
- Drove UI standardization across multiple product teams by embedding with the core UI Engineering group to architect foundational components for a shared internal React library, significantly accelerating org-wide feature delivery.
- Accelerated team velocity and standardized engineering practices by mentoring and onboarding Senior Engineers, establishing foundational code patterns and technical guidelines specific to the application processing domain.
- Actively shaped the organization's talent pipeline and engineering culture by conducting rigorous system design and pair-programming interviews, ensuring a high bar for technical excellence and architectural thinking.

Capital One | Toronto, Ontario

The Capital One Toronto Software Studio is a modern agile software studio designed with Capital One's vision of becoming a leading FinTech company.

Principal Associate Software Engineer | February 2016 – September 2021

- Led development on a customer acquisitions iPad application while pioneering an inner source micro UI platform built in React.
- Designed the initial roadmap of a new real-time application processing service to lower operating costs, improve customer experience, and remove vendor dependency.
- Served as Campus Lead for the University of Waterloo, coordinating resume reviews, code reviews, and interviews for co-op students and recent graduates.
- Oversaw the development, deployment, and production metrics around a feature to acquire new customers.
- Managed, planned, and executed disaster recovery exercises for applications under team ownership and acted as SME on AWS infrastructure in CI/CD pipelines.

Ontario Teachers' Pension Plan | Toronto, Ontario

Canada's largest single-professional pension plan that manages the investments and administers the pensions of 311,000 retired and active teachers in Ontario.

Senior Programmer Analyst | January 2009 – February 2016

- Designed and developed an Enterprise Search platform that consisted of various UIs, handlers, and services across multiple internal enterprise applications.

- Created a document management web application using HTML5 and JavaScript libraries optimized for a tablet interface.
- Served on the Design and Review group overseeing all development standards and technologies.
- Led development in upgrading the WebSphere Portal 6.1.5 environment to WebSphere Portal 7.
- Participated in and won various internal Innovation Challenges.

Codesta Canada Inc. | Toronto, Ontario

Codesta provides analysis and development services tailored to evaluate, enhance and create innovative software products and services.

Software Developer | October 2005 – December 2008

- Principal developer on a Web 2.0 J2EE search site based on Drupal, Pligg, JBoss, Spring, Lucene, Hibernate, and MySQL to create a targeted search and community portal.
 - Frontend developer for an image manipulation tool for a large social network using Adobe Flash, ActionScript, XML, and PHP.
 - Researched and wrote technical articles on PHP Frameworks for the company blog.
-

Education & Certifications

- **AWS Certified Cloud Practitioner** (September 2022)
- **Learning Tree International:** Administering SharePoint Server 2010: Hands-On (May 2012)
- **IBM Training Course:** Exploring New Features in IBM WebSphere Portal 7.0 Application Development (December 2010)
- **University of Waterloo:** Bachelor of Mathematics, Honours Co-op Computer Science (September 2000 - August 2005)
